TWave

T8 Explorer

Desktop application for **offline** visualization and analysis of historical vibration data from TWave T8 condition monitoring devices.

www.twave.io

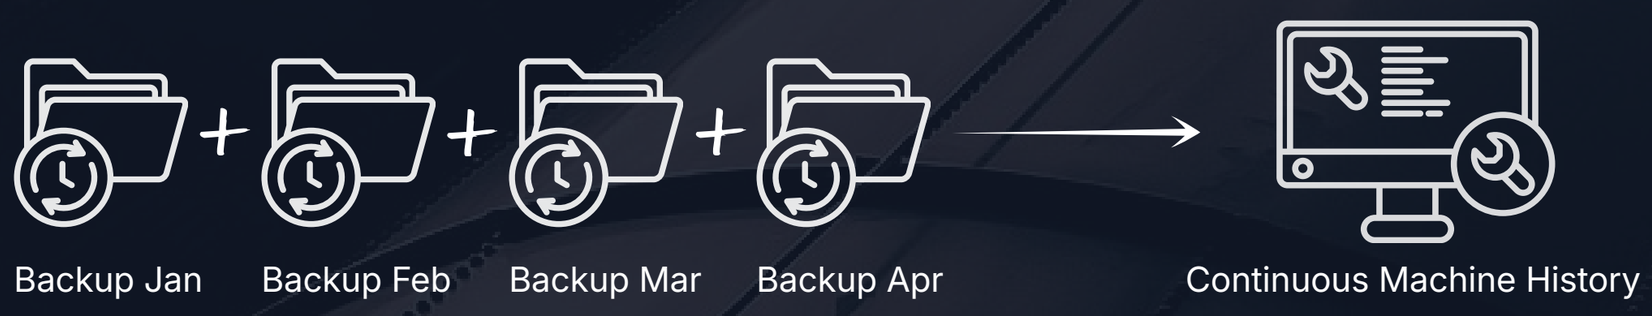

Your gateway to T8 historical data

The T8 interface you know, redesigned as an offline desktop app.

One continuous machine history, on your desktop

T8 Explorer is a powerful desktop application for the offline visualization and analysis of historical data from TWave T8 systems, bringing the T8's dashboards and analysis tools to your PC.

By automatically concatenating backups that share the same configuration (appending new measurements and ignoring duplicates) T8 Explorer builds one continuous, reliable timeline, letting analysts extend vibration analysis across a machine's full history. Backups can run automatically on a periodic schedule over SFTP, importing in the background with no user intervention.

Designed for Efficient Offline Analysis

Offline Analysis

Work with T8 historical data anytime, without needing an internet connection or access to the physical device.

Powerful Data History

Concatenate backups to create long-term, continuous machine datasets that grow over time.

Flexible Imports

Connect over SFTP, open backups from USB drives or previously saved backups on your PC, and automate scheduled backups.

Licensing System

A perpetual, per-PC licence with no subscriptions. Scale to the T8 devices you need.

Built for Real World Industrial Use

Transient Capture

Startups and shutdowns need many points captured at once. Explorer expands your T8's storage capacity.

Analysis as a Service

The analyst never touches the asset: the client sends a backup, the analyst produces the report. Same T8 dashboards, running locally offline.

Offline & Restricted Sites

Sites isolated for security, or with connectivity but where IT bans cloud services or the client requires data sovereignty.

Route-Based Collection

A Mobility Case T8 collects site by site across plants with no permanent monitoring, building each machine's history over time.

Up and running in minutes

1. **Activate your licence**
   Add your serial numbers, send us the Request Code and enter the Activation Code we return.
2. **Import your data**
   Pull backups over SFTP, from a USB drive or a local folder.
3. **Explore & analyse**
   Open the dashboards and dig into spectra, waveforms, orbits and trends with the familiar T8 widgets.
4. **Keep it growing**
   Schedule automatic SFTP backups and your machine history extends on its own.

Anytime. Anywhere.

Why TWave?

We are dedicated to transforming the way industries care for their most valuable assets

Since 2014, we have been **at the forefront of developing innovative solutions** for the monitoring and supervision of industrial machinery.

TWave specializes in **designing and producing** monitoring systems that focus on analyzing and diagnosing the operational condition of machinery.

We have earned the trust of **major global companies** and continue to expand our international presence, proving that innovation and excellence can be the
driving force behind success.

New Times. New Tools.
